

Daily Task Submission Report

Use this same template every day, for every task, throughout all 6 phases. Fill in every field before submitting.

1 Intern & Task Details

Intern Name	Mohamed Imthiyas A
Phase / Day	1
Date	01/07/2026
Task / Topic Title	Python Foundations — Build Your First Real Script
Time Spent (hrs)	0.7

2 Summary of Work Done

2–4 sentences: what did you build or learn today?

Successfully set up the Python development environment and completed the assigned profile card application. The task emphasized writing clean, well-structured code using appropriate data types, formatted output with f-strings, and basic calculations to generate dynamic information. It served as a practical introduction to the coding standards and workflow that will be followed throughout the program.

3 Steps Followed

List the key steps you completed, in order.

1. Set up the Python development environment and activated a virtual environment.
2. Created the required Python files (day1_setup.py and about_me.py).
3. Implemented the developer profile card using appropriate data types and f-strings.
4. Added comments, verified data types using type(), and included the bonus calculation.
5. Executed the program successfully and verified the output in the terminal.

4 Challenges Faced & How You Solved Them

No significant challenges were encountered. The tasks were straightforward, and the development environment and program execution were completed successfully.

Daily Task Submission Report

5

Key Learnings

What's the one thing you understand better now than this morning?

- Importance of working within a virtual environment for project isolation.
- Writing clean and readable code using meaningful variable names, comments, and f-Strings.
- Structuring a simple Python program with appropriate data types and dynamic output generation.
